1. (Previously Presented) A recreational vehicle having a main room and an expandable room movable relative to said main room to provide additional living space to said main room, a drive mechanism for moving said expandable room between extended and retracted positions, a sealing member positioned between the main room and the expandable room, and a latching mechanism mounted adjacent to a top edge of said expandable room, for latching the expandable room to the main room and moving the relative position of the sealing member and a sealing surface of the recreational vehicle, to enhance the sealing between the expandable room and said main room wherein said latching mechanism includes a latch joined to an actuator by way of a link, said latch configured to receive a bracket when said actuator is depressed and said actuator includes a flat plate extending from an opening and mounted to a plurality of arms in a pivotal connection so that depression of said plate into said opening causes said latch to further engage said bracket.
 2. (Withdrawn) The recreational vehicle as set forth in claim 1 wherein said link includes a compensator between said actuator and said latch.
 3. (Previously Presented) The recreational vehicle as set forth in claim 1 wherein said latch includes a camming surface whereby said camming surface engages said bracket in a manner further enhancing the sealing between said expandable room and said main room.
 4. (Previously Presented) The recreational vehicle as set forth in claim 1 further comprising a vehicle side wall housing said actuator and said latch, wherein said bracket is attached to said expandable room.
